

Senior/Principal Marine Cable Engineer Job Ref: 0204, (salary negotiable: based in Dundee)

In response to a growing order book, Metoc is seeking an experienced professional to lead a variety of consultancy projects associated with marine cables and their shore connections.

With a broad portfolio of clients in the offshore wind, marine interconnector and marine renewables sectors, our projects range through the full asset life-cycle from feasibility through route engineering, planning and installation.

The ideal candidate will have at least 5 years experience in Subsea Power Cable design or installation. You will have knowledge of the broader scope of issues involved in the planning, consenting and permitting of power cables, together with a thorough appreciation of the role of client engineer and working in both the offshore installation field and a consultancy office environment. Experience of vessel operations and offshore health and safety issues would be an advantage.

This position will be based our Dundee office, although the work will require periods working in other offices or on site.

In return for your skills and experience, we offer real opportunities to develop your professional competencies and your career. We operate a flexible working policy, and we can offer you a competitive salary and benefits package, with non-contributory pension, life assurance scheme, and discretionary company bonus.

If you are interested in applying, or would like more information, please send your CV with a covering letter outlining your suitability to dianes@metoc.co.uk or to Diane Summers, HR Executive, Exchange House, Liphook, Hants GU30 7DW (Tel: 01428 727800). Please quote Job Reference 0204.

For information on our other employment opportunities, please visit www.metoc.co.uk.

Metoc is an equal opportunities employer and positively encourages applications from suitably qualified and eligible candidates regardless of sex, race, disability, age, sexual orientation, or religion or belief.
